1. About Liraasa 1.0

Liraasa is a constructed language by Nicolas Bulgarides, built to be sung: pure vowels, mostly soft consonants, and words that end on open vowels a singer can hold. Edition 1.0 keeps that voice and gives the language a much stronger grammar for argument, drama, philosophy and fiction.

This guide is complete in itself: nothing from the 0.8 guide is needed. The lexicon file liraasa_1_0.json is the single source of truth for vocabulary; where this guide and the JSON disagree, the JSON wins. Edition 1.0 has 1099 headwords: 386 primal roots and 713 compounds.

Edition	What changed
0.6	First complete grammar: seven-form system, clause template, evidentials and certainty.
0.7	Harsh and colliding roots respelled; first devotional codex of six songs.
0.8	Conversation and ordinary life: 81 headwords, four discourse particles, registers.
1.0	63 narrow primal roots retired into transparent compounds; 28 new roots, mostly high-leverage abstractions; 27 new grammatical operators; a fixed 20-slot clause; logic, modality, causation, event structure and information structure made explicit; all open 0.8 questions closed.

What 1.0 is for

Edition 1.0 asked one question: can Liraasa keep its music while saying exactly what happened, who caused it, whether it was meant, whether it was allowed, whether it almost happened, and how the speaker knows? Every new word in this edition answers part of that question. Most of them are small particles that combine with every verb in the language, so a handful of words multiplies what the whole vocabulary can say.

2. Liraasa at a glance

#	Idea	Example
1	Subject, verb, object.	Maivo amora taivo. — I love you.
2	Verbs never change. Small words before the verb carry tense, mood, aspect and evidence.	Maivo po lirala. — I sang.
3	Every root has seven forms.	lumi, lumiasa, lumina, lumila, luminasan, lumisan, lumiasasan
4	The first letter of a word picks its verb ending.	lira → lirala; sora → sorasia; nimu → nimunia
5	Compounds put the head last.	miru (water) + nulu (path) = mirunulu, river
6	Particles before the verb follow one fixed order; each one scopes over everything to its right.	Maivo po tavki ralnora. — I almost fell.
7	Attitude goes last: status, then certainty or irony, then ki.	Taivo lirala poye ki?
8	Scope words (ne, doli, tu, yesta, pendi, vinto) stand right before what they affect.	Yesta Dorin po resora. — Even Dorin laughed.
9	make / let / prevent are three parallel operators.	Maivo po lesvu saivo pagopa. — I let them leave.
10	Three registers, one grammar: everyday, poetic and sacred.	li meloasasan — the divinely musical one

One sentence, fully unpacked

> ***Li loteronela roni tosu vimova li domlu transa muya deyari seye.***
> The stranger must have been watching the house for many days.

Slot	Word	Job
Subject	Li loteronela	the stranger
Aspect	roni	in progress
Evidential	tosu	inferred from evidence
Verb	vimova	see, watch
Object	li domlu	the house
Adjunct	transa muya deyari	through many days
Attitude	seye	certainly

tosu + seye is how Liraasa says the logical 'must have': I did not see it, I infer it, and I am certain.

3. Sound and spelling

Spelling is phonetic. Five pure vowels a e i o u, roughly as in Spanish or Italian. Two vowels side by side are two syllables: soraasa is so-ra-a-sa. The core consonants are l m n r s v y; around them sit b d p t g h z k c f j, used for rhythm and weight. sh and ch occur only in a few colour and number words.

Stress falls on the second-to-last syllable: LI-ra, lu-mi-A-sa, da-pa-DO-nu. A medial cluster splits between its consonants: bal-bu, mas-ka.

Rule	Applies to	Detail
New primal roots	every root added from 1.0 on	Two syllables; begins with a consonant; ends with a vowel; no initial cluster (kr-, tr- grandfathered); no three-consonant cluster; no doubled letter; at least two edits from every active word.
New function words	particles and operators	One to three syllables; vowel-final; no initial cluster; at least two edits from every active word. A monosyllable may sit one edit from another only when the two never share a position (declared pair: tu ~ su).
Protected exceptions	legacy canon	amor and apok end in consonants; opi → opioa; 36 amor- double-a roots; kr-/tr- clusters.
Canon spellings	every headword	Each headword carries protected: true. A canon spelling is never regenerated by rule; it changes only by a recorded editorial decision.

Not every word should be soft. gura (debt), kulpa (blame), zogu (shout) and zoke (irony) keep their hard consonants on purpose: the contrast between flowing vowel runs and sharper stops is a resource for drama.

4. The anatomy of a word

Three kinds of building block

Block	What it is	Seven forms?	Count in 1.0
Primal root	a basic meaning: light, song, cause	yes	386
Compound	two words fused, modifier first, head last	yes, as a whole word	713
Function word	particles, prepositions, conjunctions, articles, operators	never	149

The seven forms

#	Form	Build	From lumi	From dorva (new, intention)
1	Root (noun)	ROOT	lumi, light	dorva, intention
2	Ascended (sacred)	ROOT+asa	lumiasa, divine light	dorvaasa, divine will
3	Negated (absence, opposite)	ROOT+na	lumina, absence of light	dorvana, accident
4	Verb	verb rule	lumila, to shine	dorvada, to intend
5	Negative adjective	ROOT+nasan	luminasan, lightless	dorvanasan, accidental
6	Adjective	ROOT+san	lumisan, bright	dorvasan, deliberate
7	Ascended adjective	ROOT+asasan	lumiasasan, holy	— (unused)

The dorva column shows why 1.0 invests in abstract roots: one new root gives intention, accident, deliberate, accidental and to intend. Ascended forms lift a concept into the sacred or mythic; they never mean 'very' (use ruli) or 'most' (use mosa). The negated forms name an absence or opposite and never replace the sentence negator ne.

About 60% of all forms are glossed '— (unused)'. They are grammatical words with no fixed meaning; a poet may use one literally, but no one may give it an official meaning without a recorded editorial decision.

The verb rule

Step	If the word…	Add	Examples
1	is opi	-oa	opi → opioa
2	starts with n	-nia	nerpo → nerponia (expect)
3	starts with s	-sia	semvi → semvisia (permit)
4	starts with a vowel	-a	amor → amora
5	starts with any other	that consonant + a	vordu → vorduva (cause);

Step	If the word…	Add	Examples
	consonant		dapadonu → dapadonuda (sell)

Only the first letter of the whole word counts, so a compound takes its verb class from its modifier: vorba → vorbava but nimuvorba → nimuvorbania.

Suffixes and derivations

Order: ROOT + (one form or one derivation) + -ti + -ri. A word takes either one of the seven forms or one derivation, never both.

Suffix	Meaning	Attaches to	Example
-ti	little, softened	any lexical form; personal names	nelati, little person; Dorinti
-ri	plural	far right of a noun or pronoun	sorari, friends
-yo	one who does it	the root	lirayo, singer; zeldoyo, rebel
-vu	big, grand	the root	liravu, grand song; tisebitivu, sword
-pago	place of the activity	the root (not mavo)	bumrepago, bakery; kaldopago, prison

Fixed derivations in 1.0: tisebitivu (sword, 'big knife'), tibivu (rope), kaldopago (prison), zeldoyo (rebel), kronopago (anniversary).

Compounds

A compound is MODIFIER + HEAD written together, with no change to either part. The head says what kind of thing it is: mirunulu (water + path) is a kind of path, a river; renlimomvi (rain + loss) is a kind of loss, a drought. In 1.0 both parts must be active headwords, and a compound behaves like a root in every way.

Many older compounds are lexicalised metaphors (mavolumi, mind + light, is the soul); the lexicon gloss always wins over a literal reading. Compounds new in 1.0 aim to be transparent: lumibiti (light-tool) lamp; havlikova (breath-vessel) lung; yugesolo (body-stone) bone; navufaru (sky-fire) lightning.

Reading words apart

Read from the right edge inward and look up the longest known word first: manlibumreri = manlibumre + ri (doughs); dorvanasan = dorva + nasan (accidental). Never strip suffixes blindly; many roots end in letters that look like suffixes (navu, sevu, trana, pago).

5. Nouns, pronouns and the noun phrase

[QUANTIFIER] [li | eli | ola | OWNER de] [NUMBER] [ADJECTIVES] NOUN[-ti][-ri] [de …] [raho CLAUSE]

> ***Li vanisan lirari raho taivo lirala.***
> The beautiful songs that you sing.

Word	Meaning	Notes
li	the	may drop in verse, and in speech when the referent is obvious
baba	a, an	new singular reference
eli / eliri	this / these	also stand alone as pronouns for things
ola / olari	that / those	ola alone = what was just said
toda · somi · nuna	every · some · no	also build the correlatives
muya · poka · rada	many · few · each	rada takes a singular noun

Person	Singular	Plural	Possessive	Reflexive
1st	maivo	maivori	maivo de …	maivo sela
2nd	taivo	taivori	taivo de …	taivo sela
3rd person	saivo	saivori	saivo de …	saivo sela
3rd thing	ito	itori	ito de …	ito sela

Pronouns do not change for subject and object, and the language is gender-neutral: saivo is he, she and singular they. Possession is OWNER de THING (taivo de lira, your song); de is never dropped.

Preposition	Meaning	Preposition	Meaning
en	in, during	ultra	beyond
su	on	hupi	above
ala	to, toward	tula	below
da	from	ligo	near
ko	with	vofa	far from
vobi	for, on behalf of	voyu	without
intra	within	kroti	before
entre … ata	between … and	krotiapo	after
transa	through, across	sabri (1.0)	except
korsi (1.0)	instead of, rather than	nevi + NP (1.0)	despite

6. The clause

Every slot except SUBJECT and VERB is optional. When several appear they keep this order, and each preverbal operator scopes over everything to its right (ruling G1).

#	Slot	Words	Notes
1	FRAME	time words, correlatives of time, zafra, finra, lanto, kenvi	clause-initial; followed by a pause
2	TOPIC	NP + hozi	optional; at most one per clause except paired contrastive topics in parallel clauses
3	SUBJECT	noun phrase, pronoun	obligatory except in commands, hortatives and permitted ellipsis
4	TENSE	po, futu, pressa	none = present
5	REALITY	noma	counterfactual
6	NEGATION	ne	floats: may also stand before any later operator or the verb, negating what follows
7	MODAL	povi, nosi, dagi, musi, suvi, viki, kopi	one per clause
8	APPROACH	tavki, fututi	almost / about to
9	PHASE	hiro, teki	begin / stop
10	EFFORT	telvo, vazdi, fesmo	try / manage / try and fail
11	ASPECT	roni, tefa, sahi	progressive / completed / habitual
12	ITERATION	bodu, reve, loki	already / again / still; reve and loki may instead close the clause
13	EVIDENTIAL	yehu, gesu, bisu, vuda, buyu, tosu	one per clause
14	VERB	any verb form, copulas ke ka kapoki loya miyo, valency operators vaku lesvu tekvu (+ ACTOR + embedded verb), gome (+ verb)	
15	OBJECT	noun phrase	
16	ADJUNCTS	prepositional phrases, la + adjective, vobi NP, sabri NP, korsi NP	
17	RECIPROCAL	fuyi	
18	STATUS	hoyo, yasmo	mirative / shared knowledge
19	ATTITUDE	seye, mufe, poye, pifu, zoke	zoke excludes the other four
20	QUESTION	ki	last word of its clause

```
Template: [FRAME] [TOPIC hozi] SUBJECT [TENSE] [noma] [ne] [MODAL] [APPROACH] [PHASE]
[EFFORT] [ASPECT] [ITERATION] [EVIDENTIAL] VERB [OBJECT] [ADJUNCTS] [fuyi] [hoyo|
yasmo] [ATTITUDE] [ki]
```

Tense

Particle	Meaning	Example
(none)	present	Maivo lirala. — I sing.
pressa	emphatic present	Maivo pressa lirala. — I sing now.
po	past	Maivo po lirala. — I sang.
futu	future	Maivo futu lirala. — I will sing.

Frame tense (optional): a bare Po or Futu opening a paragraph sets the tense for following main clauses until another tense word or the end of the paragraph.

> ***Po — Li nullo ke lasosan. Ilora talbeta ligo li vimolalle.***
> The night was silent. Ilora stood by the window.

Being, becoming, existing

Word	Meaning	Example
ke	is, right now	Maivo ke ruli lemvosan. — I'm very tired.
ka	is, by nature	Li sora ka benasan. — The friend is good.
kapoki	used to be	Maivo kapoki gilbusan. — I was once guilty.
loya	becomes	Li nullo po loya sovesan.
miyo	there is	Miyo baba nosvo. — There is a possibility.

venreva (come) with an event as subject means 'take place, happen' (G23).

> ***Li dapadonu po venreva kroti li nilvu.***
> The sale took place before winter.

7. Modality and the unreal

1.0 separates ability, possibility, permission, obligation and wish, which 0.8 partly blended.

Word	Meaning	Kind	Example
povi	can, be able	ability	Maivo ne povi conodonuca. — I can't pay.
nosi	might	possibility (epistemic)	Saivo nosi lirala. — They might sing.
dagi	may, be allowed	permission (1.0)	Taivo dagi lisrola. — You may stay.
musi	must	obligation, circumstantial necessity	Maivo musi pagopa. — I must go.
suvi	should	advice	Taivo suvi somusia.
viki	would	hypothetical	Maivo viki lirala.
kopi	hope to	aspiration	Maivo kopi lirala.

Logical 'must' is not musi: it is the inferential evidential tosu with seye (G4). Intention is not kopi: it is the verb chain dorvada sidu VERB (G5).

> ***Maivo dorvada sidu lirala toda-krono.***
> I intend to sing forever.

noma: the contrary-to-fact clause

noma comes right after tense and marks a clause as unreal. It distinguishes an open past condition (maybe it happened) from a counterfactual (it did not).

Pattern	Meaning	Example
po noma suvi V	should have V-ed (but didn't)	Maivo po noma suvi lirala.
po noma povi V	could have V-ed (but didn't)	Taivo po noma povi senosia ito ala maivori!
si … po noma V, … po viki V	if X had happened, Y would have	Si taivo po noma lisrola, maivori po viki loya yanbasan la yanosan.
si … noma V (present), … viki V	if X were the case, Y would be	Yesta si li simvo noma ka baba telne, li telne viki loki ka simvosan.

> ***Si taivo po noma masuma, maivo po viki relsira.***
> If you had asked, I would have answered.
>
> ***Si maivo po masuma, taivo po viki relsira.***
> If I asked (and perhaps I did), you would have answered.

8. Event structure

Between the modal and the verb sit five slots that describe the shape of an event. At most one word per slot.

Slot	Word	Meaning	Example
Approach	tavki	almost	Maivo po tavki ralnora. — I almost fell.
Approach	fututi	about to	Maivo po fututi pagopa. — I was about to leave.
Phase	hiro	begin to	Li veluri po hiro lirala. — The stars began to sing.
Phase	teki	stop doing	Kipo po teki resora. — Kipo stopped laughing.
Effort	telvo	try to	Maivo po telvo lirala. — I tried to sing.
Effort	vazdi	manage to	Saivo po vazdi hirnaha. — They managed to escape.
Effort	fesmo	try and fail	Maivo po fesmo relsira. — I couldn't answer, though I tried.
Aspect	roni · tefa · sahi	in progress · completed · habitual	Maivo po tefa lirala. — I had finished singing.
Iteration	bodu · reve · loki	already · again · still / keep on	Li domlucono po keleka reve.

loki covers both 'still' and 'keep on' (G8). reve and loki may also close the clause.

Stacking and exclusions

Left scopes over right: po tavki hiro lirala is 'almost began to sing'. ne negates what follows it, so its position decides what is denied (G15).

> ***Saivo po ne vazdi lirala.***
> They did not manage to sing.
>
> ***Saivo po vazdi ne lirala.***
> They managed not to sing.

Never together	Why
hiro + roni	same slot or contradictory
hiro + tefa	same slot or contradictory
teki + roni	same slot or contradictory
teki + tefa	same slot or contradictory
telvo + tefa	same slot or contradictory
vazdi + tefa	same slot or contradictory

Never together	Why
fesmo + tefa	same slot or contradictory
zoke + seye	same slot or contradictory
zoke + mufe	same slot or contradictory
zoke + poye	same slot or contradictory
zoke + pifu	same slot or contradictory
tavki + fututi	same slot or contradictory
hoyo + yasmo	same slot or contradictory

A clause rarely needs more than four preverbal operators; if it does, split it.

9. Agency and causation

make, let, prevent

Three parallel operators fill the verb slot of the main clause. The actor follows, then the actor's own optional ne, approach, phase and effort words, then its verb. Tense, modal and evidential belong to the main clause only (G14).

Operator	Meaning	Example
vaku	make, cause to	Dorin po vaku maivo sulnosia. — Dorin made me wait.
lesvu	let, allow to	Maivo po lesvu saivo pagopa. — I let them leave.
tekvu	prevent from	Maivo po tekvu saivo pagopa. — I prevented them from leaving.

There is no root for 'kill': it is vaku … daigoda, 'make … die'.

> ***Dorin ne vaku li loteronela daigoda.***
> Dorin did not kill the stranger.

On purpose and by accident

The intention root dorva gives the adverbs la dorvasan (deliberately) and la dorvanasan (accidentally).

> ***Maivo po vaku ito farufa — nara la dorvanasan!***
> I made it burn — but by accident!

> ***Taivo de amor ka dorvasan, ne dorvanasan.***
> Your love is deliberate, not an accident.

For someone, despite something

vobi + NP is 'for the benefit of, on behalf of' (G12); nevi + NP is 'despite' and nevi + clause is 'although' (G11).

Construction	Pattern	Example
Passive	PATIENT [TENSE] gome VERB [gagu AGENT]	Li lira po gome lirala gagu taivo.
Reciprocal	PLURAL SUBJECT VERB fuyi	Maivori amora fuyi.
Reflexive	PRONOUN sela	Maivo vimova maivo sela.
Verb chain	VERB sidu VERB2	Maivo vurlova sidu lirala.
Weather	VERB alone	Renlira.

gome may passivise any verb used with an object; a verb used without one cannot take gome.

10. Evidence, certainty and discourse status

Evidential	Source	Sung colour
yehu	seen	clear
gesu	heard	echoed
bisu	felt	warm
vuda	dreamed	airy
buyu	reported	distant
tosu (1.0)	inferred from evidence	measured, level

One evidential per clause, right before the verb. After the predicate come, in order: a discourse-status word, an attitude word, and ki.

Final word	Meaning	Example
hoyo	newly discovered, surprising	Saivo milobema hoyo! — She's smiling — who knew!
yasmo	as is known; shared knowledge	Kipo ne bumreba yasmo.
seye · mufe · poye · pifu	certainly · probably · perhaps · I hope so	Taivo lirala poye ki?
zoke	irony; excludes the four above	Dorin milobema toda-krono, zoke.

Attitude words are always clause-final; to say 'Perhaps…' at the start of a sentence, put poye at its end (G22).

> ***Somi-coda ka vordunasan poye.***
> Perhaps some things are causeless.

11. Negation and scope words

ne goes immediately before what it negates. Five more scope words follow the same rule: they stand right before the constituent they affect.

Word	Meaning	Example
ne	not	Ne Dorin bumreba, nara Kipo. — It isn't Dorin who bakes, it's Kipo.
doli	only	doli taivo — only you
tu	also, too	Tu Kipo po bumreba. — Kipo baked too.
yesta	even	Taivo ne yesta bumreba! — You don't even bake!
pendi	exactly	pendi dossa cono — exactly two coins
vinto	focus: it is X that…	Vinto Kipo po bumreba li bumre.

Two kinds of not: ne denies a statement; -na inside a word names an absence or opposite. Two negatives cancel: Maivo ne sabesia nuna-coda means 'it isn't true that I know nothing'. For an emphatic never, use nuna-krono.

12. Information structure

A topic is announced with hozi after a clause-initial noun phrase and a pause. Two parallel clauses with hozi set up contrastive topics. vinto marks narrow focus inside a clause; hozi and vinto never mark the same phrase (G18).

> ***Li bumre hozi, Kipo po bumreba ito.***
> As for the bread, Kipo baked it.
>
> ***Kipo hozi, saivo lirala; Dorin hozi, saivo resora.***
> Kipo sings; Dorin, on the other hand, laughs.
>
> ***Kipo po bumreba vinto li bumre.***
> It was the BREAD that Kipo baked.

13. Questions

Say the statement and add ki at the very end. Wh-questions use the ki- correlatives in the position of the answer and take no final ki.

Question	Word	Example
what	ki-coda	Ki-coda ka li cemopaturi?
who	ki-nela	Ki-nela po vaku li bumre farufa?
where	ki-pago	Ki-pago taivo pagopa?
when	ki-krono	Ki-krono maivo lirala?
why	ki-kasa	Ki-kasa taivo somusia?
how	ki-modo	Ki-modo taivo lirala?
which	ki-eli + noun	Ki-eli lira taivo amora?
whether (embedded)	ki-oro (1.0)	Maivo masuma ki-oro taivo futu relnura.

si now means only 'if'; 'whether' is ki-oro (G2). zabo is yes and kepi is no.

14. Linking clauses and logic

Word or pattern	Meaning	Example
ata	and (only; 'also' is tu)	lira ata melo
oro … oro …	either … or …	Oro li lanve tranata, oro Kipo tovota li bumrepago.
ne … ne …	neither … nor …	Ne li dapadonuyo ne li dapatovoyo vazrava eli senoralka.
nara	but	Maivo lirala nara saivo ne lirala.
si	if	Si taivo lirala, maivo futu meloma.
sina	unless	Sina saivo pagopa, maivo ne lirala.
doli si	only if	Li bumrepago gome dapadonuda doli si li lanve semvisia ito.
yesta si	even if	Yesta si taivo tavreta, maivo futu pagopa.
si …, ata doli si …	if and only if	Si li lanve tranata, ata doli si li lanve tranata, li bumrepago futu gome dapadonuda.
sabri	except (that)	Toda-nela po venreva sabri Dorin.
korsi	instead (of), rather than	Korsi, maivo po lisrola.
tonsi	therefore	Tonsi li lanve po ne semvisia ito.
narli	nevertheless	Narli, maivo po lisrola.
kasa	because	Maivo somusia kasa maivo ke lemvosan.
kopisa	so that	Sarbisia ito, kopisa ne taivo ne maivo ramumomvira.
nevi	although; despite (+NP)	Nevi saivo ke silisan, saivo lirala.
fime	that (content clause)	Maivo sabesia fime taivo lirala.
raho	who, which (relative)	Li nela raho maivo amora.

A raho-clause that does not end the sentence is closed by a comma in writing and a pause in speech (G21):

> ***Li sabeyo raho vismava eli, ne yehu vimova li vordu.***
> The scholar who notices this has not seen the cause.

Time clauses

Word	Meaning
kube	when
nayo	while
tuni	until
sige	since (always marks its own tense)

Word	Meaning
kureli	as soon as

Clauses with fime, raho, kube, nayo, kasa, kopisa and tuni borrow the main clause's tense unless they mark their own. kroti and krotiapo are prepositions, not conjunctions.

15. Narrative sequence

Word or pattern	Meaning	Example
zafra	suddenly	Zafra, li dorbi lallela.
finra	finally, at last	Finra, Ilora povi havliha.
lanto	eventually	Lanto, li renli po teki renlira.
kenvi	immediately	Kenvi, Ilora vismava saivo.
la nerponasan	unexpectedly	La nerponasan, taivo po talbeta ligo maivo de dorbi.
kroti ola	previously	
nayo ola	meanwhile, simultaneously	
krotiapo	afterwards	
krotiata	then, next	

16. Degree, comparison and quantity

Want to say	Pattern	Example
very X	ruli ADJ	ruli vanisan
more / less X than Y	kasi / menu ADJ tamo Y	kasi velbisan tamo li sonbu
as X as Y; like Y	gase ADJ gase Y; gase Y	Taivo lirala gase pilo.
most / least	mosa ADJ, lusu ADJ	mosa vanisan
at least / at most N	lusu N / mosa N (G9)	Ito dapada mosa tressa.
about N	gase N	gase mililumi pebuvalmiri
exactly N	pendi N	pendi dossacenta cono
adverb	la ADJ	la molusan, gently

The correlative grid combines ki, eli, ola, toda, nuna, somi with coda (thing), nela (person), pago (place), krono (time), modo (manner) and kasa (reason): ki-pago where, eli-krono now, nuna-nela no one, toda-coda everything.

17. Numbers, time and colour

Value	Digit	×10	×100
0	zira		
1	una	unzira	centa
2	dossa	dozira	dossacenta
3	tressa	trezira	tressacenta
4	cuara	cuazira	cuaracenta
5	penta	penzira	pentacenta
6	sesa	sesazira	sesacenta
7	seta	setazira	setacenta
8	ocha	ochazira	ochacenta
9	niva	nivazira	nivacenta

mililumi is 1,000 and megalumi 1,000,000; groups join with hyphens, largest first (dozira-una, 21). Ordinals are canon: NUMBER-ne before the noun (una-ne, first). Fractions are NUMBER de NUMBER (tressa de cuara, three quarters).

Time words: deya day, deyafama week, monta month, montafama year, lornu hour, minota minute, seca second; deyapressa today, deyaapo yesterday, deyafutu tomorrow; merno, vesno, nullo with -pressa (this …) and -futu (tomorrow …).

Nine base hues (rubi, ojo, aurumi, azuri, verde, vio, shada, vana, erta) take narvo (dark), bio (vivid), juba (gem) and lumi (light): rubilumi, pink.

18. Conversation

Particle	Job	Example
hema	hesitation: well…	Hema… maivo ne sabesia.
nido	self-repair: I mean	Maivo amora taivo, nido, maivo devoda taivo.
yori	back to the topic: anyway	Yori, maivo de seno: …
zoke	irony: yeah, sure	Taivo po bumreba eli, zoke ki?

Speech may break off after any particle; the listener already knows what kind of sentence was coming. A repeated subject may drop in coordinated clauses and answers, keeping the tense. Everyday functions: Sulnosia! (wait), Vera ki? (really?), Zabo, seye. (of course), Neduna! (enough!), La vera, … (actually).

19. Registers and performance

Everyday, poetic and sacred Liraasa share every rule. The sacred register is made mainly by the ascended forms (li meloasasan, li meraasasan); there is no separate word list. Speakers may use ascended forms ironically or as exclamations: Ola ka bumreasasan! (That is divinely bready!)

Performance shapes delivery, never spelling. Particles are said quickly and lightly so the stressed syllables of content words carry the rhythm. New 1.0 operators follow the same convention: in Maivo po tavki ralnora the beats fall on MAI, TAV and NO. The sacred endings -asa and -asasan are the doorway into melisma.

20. Reading older texts

Text written before 1.0 is read with lexicon_0_8_rc2.json (G19). No retired spelling is reassigned in 1.0, so an old word can never be misread with a new meaning; every retired form maps to a 1.0 form in legacy.migration_forms, and migrate_text.py converts old text mechanically. The six canonical songs needed only 11 line changes: Songs I and VI are unchanged, and Song II's honey becomes yomla.

0.8	1.0	0.8	1.0
rohu (petal)	folnipatu	yoga (honey)	yomla
sabire (sanctuary)	sasvapago	sonsa (blush)	farufasbi
mine (melting)	milve	liltu (lightning)	navufaru
rivla (river)	mirunulu	lalma (lamp)	lumibiti

21. Rulings

ID	Topic	Ruling
G1	Scope by position	Every preverbal operator scopes over everything to its right. Pre-constituent operators (ne, doli, tu, yesta, pendi, vinto) scope over the single constituent that follows them.
G2	si and whether	si means only 'if'. 'whether' is ki-oro. 0.8 texts that used si for 'whether' are read under 0.8 rules.
G3	Permission vs possibility vs ability	povi = ability; nosi = epistemic possibility (might); dagi = permission (may, be allowed). 0.8's double use of nosi is split.
G4	Epistemic necessity	'must (logically)' = inferential evidential tosu + seye; musi is only obligation or circumstantial necessity.
G5	Intention	Intent is the verb chain 'dorvada sidu VERB' (intend to); kopi is only 'hope to'. Deliberately = la dorvasan; accidentally = la dorvanasan.
G6	Counterfactual	noma marks a clause as contrary to fact. 'should have' = po noma suvi; 'could have' = po noma povi; 'would have' = po viki (in a consequence clause) or po noma viki.
G7	Imminence	fututi in the approach slot means 'about to': Maivo po fututi pagopa = I was about to leave. As a clause-initial time word it still means 'soon'.
G8	Continuation	loki covers both 'still' and 'keep on'; no separate continuative is added.
G9	Quantity limits	Before a number or quantity, lusu = at least, mosa = at most, gase = approximately; pendi = exactly.
G10	Paired conjunctions	oro A oro B = either A or B; ne A ne B = neither A nor B; doli si = only if; yesta si = even if; 'si …, ata doli si …' = if and only if.
G11	Despite	nevi + noun phrase = despite: nevi li zeldo, despite the resistance. nevi + clause = although.
G12	Benefactive	vobi + noun phrase = for the benefit of / on behalf of (unchanged), and combines with any operator.
G13	ata	ata is 'and' only; additive 'also' is tu.
G14	Valency operators	vaku (make), lesvu (let) and tekvu (prevent) fill the verb slot of the main clause; the actor follows, then the actor's own [ne] [phase] [effort] verb. Tense, modal and evidential belong to the main clause only.

ID	Topic	Ruling
G15	Negation and operators	ne before an operator negates the operator; ne after it negates the event: po ne vazdi lirala = didn't manage to sing; po vazdi ne lirala = managed not to sing.
G16	Exclusions	At most one word per slot. hiro/teki do not combine with roni or tefa. tavki excludes fututi (same slot). The effort slot (telvo, vazdi, fesmo) excludes tefa. noma requires a tense, modal or si-clause context.
G17	Unexpectedly / previously / simultaneously	la nerponasan = unexpectedly; kroti ola = previously; nayo ola = meanwhile/simultaneously; krotiapo = subsequently. No new words.
G18	Topic and focus together	A hozi-topic opens the clause; vinto may then mark a focus inside it. hozi and vinto never mark the same constituent.
G19	Version gating	Texts dated before 1.0 are interpreted with the 0.8 lexicon and rules. A 1.0 reader meeting a retired spelling looks it up in legacy.retired and reads the 1.0 replacement.
G20	Lexicalised derivations	tisebitivu (sword), tibivu (rope), kaldopago (prison) and zeldoyo (rebel) are fixed meanings of regular derivations.
G21	Closing a relative clause	A raho-clause that does not end the sentence is closed by a comma in writing and a pause in speech: Li sabeyo raho vismava eli, ne yehu vimova li vordu. (Found in stress-testing: without the pause the main verb is read inside the relative clause.)
G22	Attitude words are clause-final only	seye, mufe, poye, pifu and zoke never open a clause. 'Perhaps, …' at the start of a sentence is written with the clause-final poye. (Found in stress-testing.)
G23	Events taking place	venreva (come) with an event as subject means 'take place, happen': Li dapadonu po venreva kroti li nilvu, the sale took place before winter.

0.8 rulings R1, R2, R4–R12 remain in force. R3 (the frozen Root Review queue) is closed by 1.0.
